## Introducing the first Briess single-malt extracts

CHILTON, WI —Briess has announced that it is introducing two new CBW<sup>®</sup> malt extracts to its product portfolio, each produced from a single malt:

- [CBW<sup>®</sup> Goldpils<sup>®</sup> Vienna malt extract](#) (6° L at 8° Plato) is made from 100% Briess Goldpils<sup>®</sup> Vienna Malt
- [CBW<sup>®</sup> Pale Ale malt extract](#) (6° L at 8° Plato) is made from 100% Briess Pale Ale Malt

These single-malt extracts make converting from extract to all grain, or vice versa, easier. And it gives the creative brewer total liberty and control. Two popular CBW<sup>®</sup> malt extracts from Briess — CBW<sup>®</sup> Pilsen Light and CBW<sup>®</sup> Golden Light Malt — are close behind this pair. But at 99% Briess Pilsen Malt and Briess Brewers Malt, respectively, and 1% Briess Carapils<sup>®</sup> Malt, these malt extracts can't qualify for the "single malt" category.

### **Briess Goldpils<sup>®</sup> Vienna malt characteristics**

This traditional German-style malt is characterized by malty flavor with hints of biscuit. When formulating with either the extract or whole kernel malt, brewers should keep in mind that Goldpils<sup>®</sup> Vienna Malt is less sweet than Pale Ale Malt, and contributes less color than Munich Malt.

### **Briess Pale Ale Malt characteristics**

Briess Pale Ale Malt has a unique flavor profile that sets it apart from other versions of this malt offered to American craft brewers. Briess maltsters designed it to be a fully modified, high extract, low protein malt, not just a darker Brewers Malt. This required developing a proprietary malting recipe that involves careful monitoring of the kiln drying cycle and specialized temperature rests. The result is a base malt with rich malt flavors and hints of biscuit and nuts. These characteristics are present in both the extract and whole kernel malt products.

CBW® stands for Concentrated Brewers Wort. These brewer's grade malt extracts are brewed on a 500-bbl state-of-the-art brewhouse, the second largest in Wisconsin. They are unhopped and nondiastatic to offer brewers creative control. Briess CBW® malt extracts are gently vacuum evaporated to maintain their rich, full flavor and lessen color development, and produced using a multiple step infusion brewing process for high fermentability.

This brings to 11 the total number of nondiastatic, unhopped CBW® malt extracts from Briess:

- CBW® Pilsen Light (2° L)
- CBW® Bavarian Wheat (3° L)
- CBW® Golden Light (4° L)
- CBW® Goldpils® Vienna (6° L)
- CBW® Pale Ale (6° L)
- CBW® Munich (8° L)
- CBW® Rye (9° L)
- CBW® Sparkling Amber (10° L)
- CBW® Porter (17° L)
- CBW® Traditional Dark (30° L)
- CBW® Special Dark (90° L)

Homebrew retailers and licensed breweries can purchase Briess products from an authorized distributor. Licensed breweries can also purchase Briess products directly from Briess.
